#### **CONCRETE FOUNDATION**

If you choose to install your kit on a concrete slab refer to the diagram below. Attach the sill plates on the foundaton as shown, and continue on to page 14.

Allow new concrete slabs to cure for at least seven (7) days.

• A treated 2 x 4 (5,1 x 10,2 cm) sill plate is required when installing your shed on concrete.

Purchase full length treated lumber, or butt shorter pieces end-to-end and seal seams with caulk.

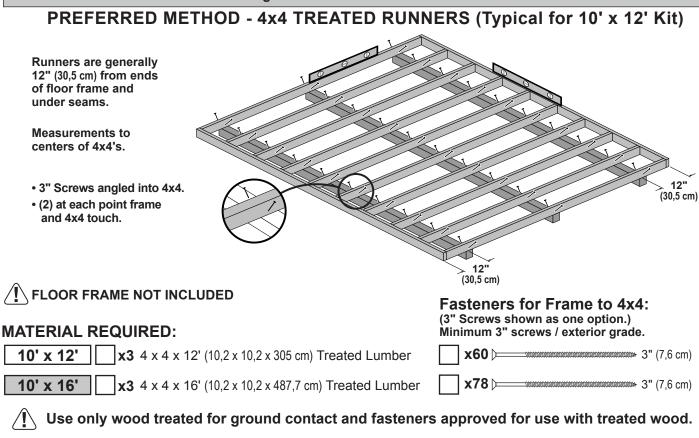

• Use a high quality exterior grade caulk beneath all sill plates.

• Fasten 2 x 4 (5,1 x 10,2 cm) sill plates to slab using approved concrete anchors (fasteners not included).

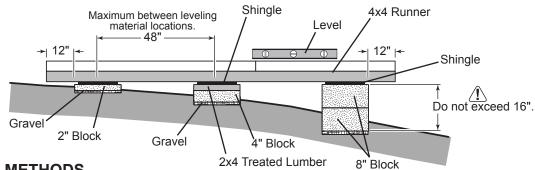

Check local code for concrete foundation requirements.

# **OPTIONAL WOOD FRAME FLOOR LEVELING OPTIONS**

There are multiple ways to level your floor frame. Our recommended leveling method is shown below. Leveling materials are not included in this kit.

#### Always support frame seams.

#### LEVELING METHODS

- Level under 4x4 runners only.
- Locate leveling material 12" from ends of runners and no more than 48" apart.
- Asphalt shingles should be used between 4x4 runners and blocks or treated lumber. Never use shingles in direct contact with ground.
- For best results and aiding in water drainage use gravel under each concrete block.

#### LEVELING MATERIALS

Gravel

Solid Masonry Blocks in 1", 2", 4" or 8" thickness

2x4 Treated Lumber

Asphalt Shingles

Leveling higher than 16" not recommended.

# LEVELING & SQUARING THE FLOOR FRAME (Not Included)

LEVEL AND SQUARE FLOOR FRAME

Before attaching floor decking, it is important to level and square the floor frame. A level and square floor frame is required to correctly construct your shed. STOP!

See page 10 for the preferred floor leveling method.

## **V**BEGIN Use a level and ensure the frame is level before applying floor panels.

Check for frame squareness by measuring diagonally across the corners.

If the measurements are the same, the frame is square.

STOP!

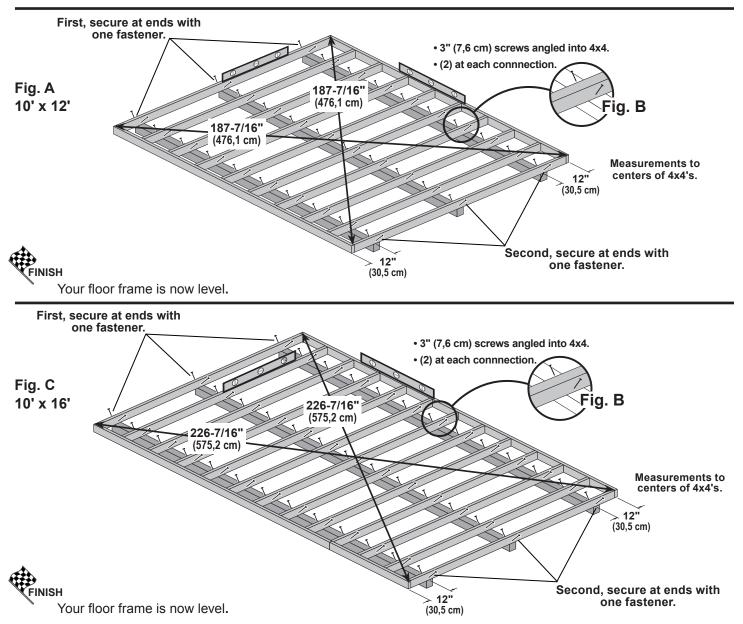

1

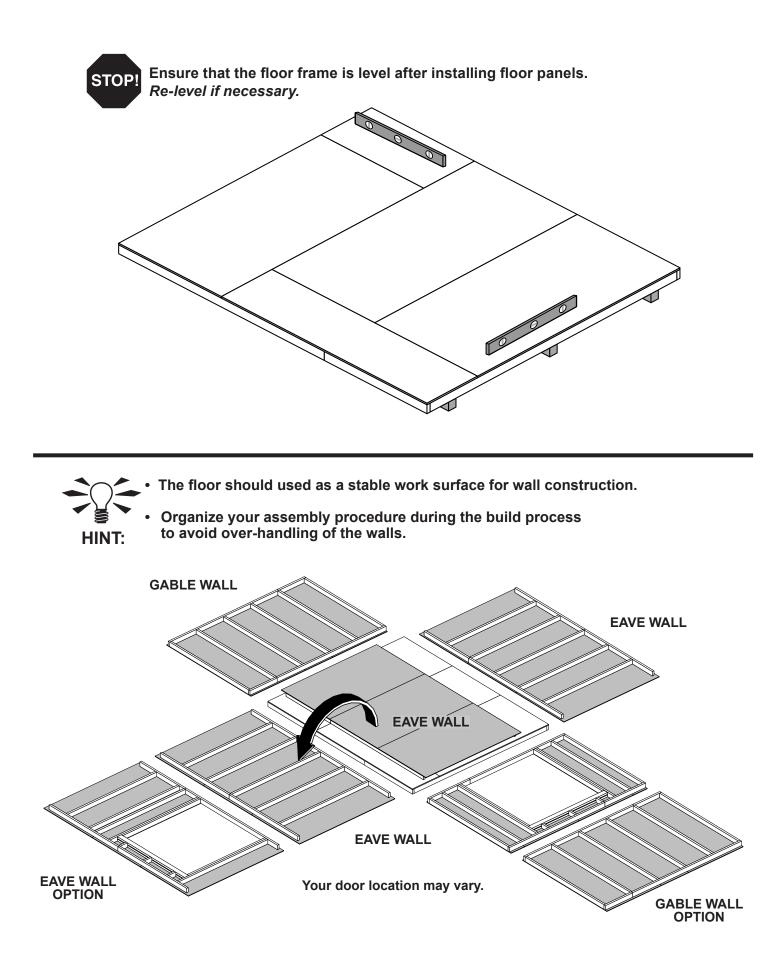

- The diagonal measurement for 10' x 12' will be approximately 187-7/16" (476,1 cm) (Fig. A).
- The diagonal measurement for 10' x 16' will be approximately 226-7/16" (575,2 cm) (Fig. C).

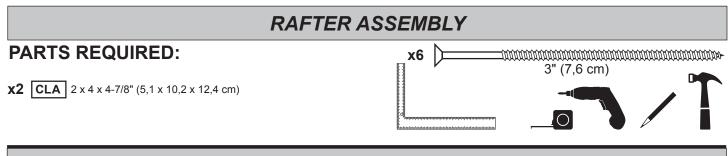

After the frame is level and square, secure one side of frame to 4x4 runners using one fastener at ends of each runner. At the opposite end of the frame, secure the frame to 4x4 runners with one fastener at the ends of each runner, ensuring that the frame remains square.

Fasten the frame to the 4x4 runners with (2) 3" screws at each connection (Fig. B).

4x4 runners are generally installed 12" (30,5 cm) from ends of floor frame and under any seams.

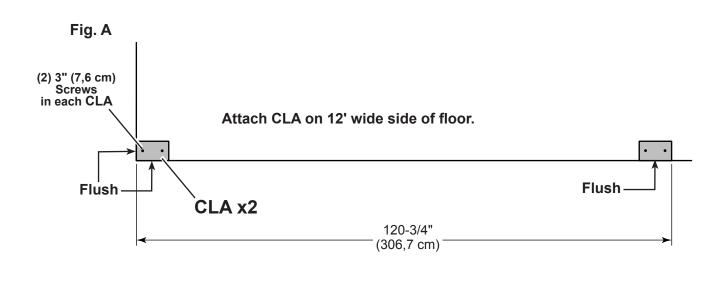

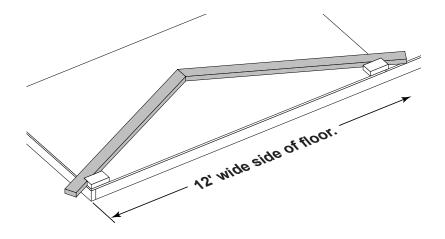

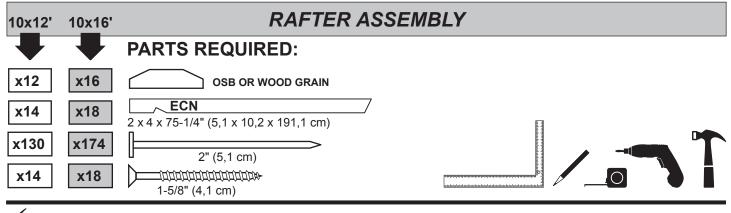

# Build a rafter jig using the floor and (2) CLA parts.

#### 

Secure (1) **CLA** flush to the floor deck with (2) 3" screws (**Fig. A**). Measure over 120-3/4" (306,7 cm) and install a second **CLA** flush to the floor deck. Secure with (2) 3" screws.

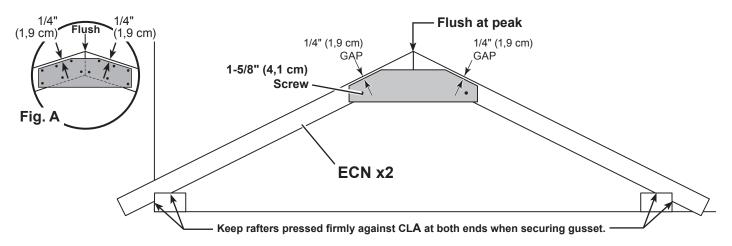

Place (2) rafters **ECN** into the jig, as shown.

Press **ECN** firmly against the outside of **CLA**'s, as shown (**Fig. A**) and push rafters tight to the middle. Rafters should touch (flush) at peak (**Fig. A**).

Place gusset onto **ECN** with a 1/4" gap from edge **(Fig. A)** while holding rafters in place. Secure gusset with (1) 1-5/8" screw into each rafter.

*HINT: These screws will help hold the measurements when you nail on gussets.* Secure the gusset to the rafters with (10) 2" nails in the pattern shown (Fig. A).

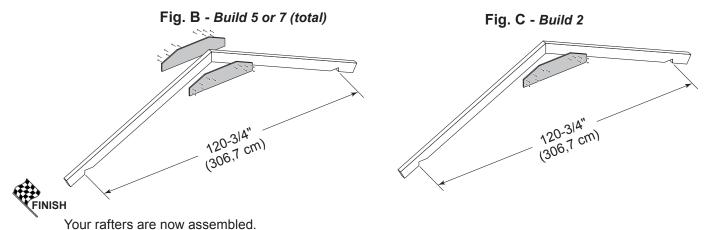

3

Flip over rafter assembly and fasten a 2nd gusset with 2" nails (Fig. A, Flg. B). No need to use the jig for the 2nd gusset.

Repeat steps 1-3 to build (4) or (6) ADDITIONAL rafters with (2) gussets (FIg. B).

Repeat steps 1 and 2 to build (2) rafters with only (1) gusset (Flg. C)

## PAINT & CAULK - NOT INCLUDED -

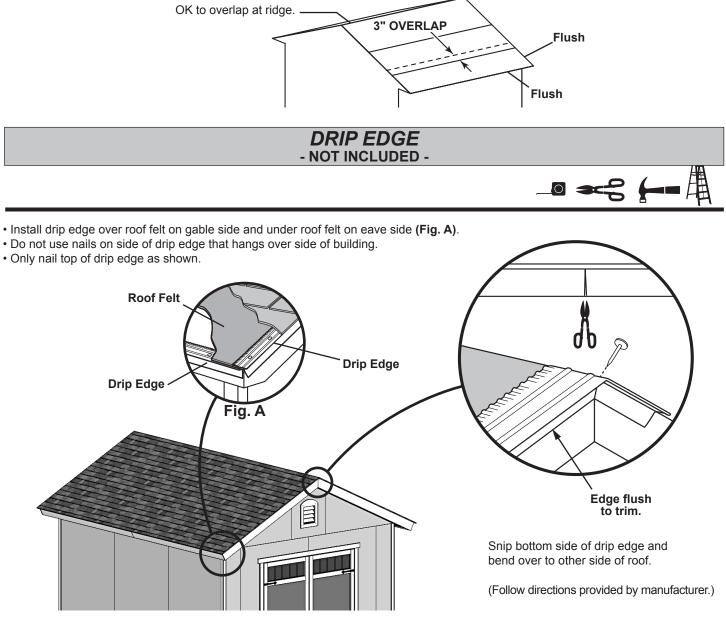

- Use acrylic latex caulk that is paintable. Caulk at all horizontal and vertical seams, between the trim and walls, and all around the door trim.
- Use a high quality exterior acrylic latex paint. When painting your building, there are a few key areas that can be easily overlooked that must be painted:
  - Bottom edge of all siding and trim
  - · Inside of doors and all 4 edges

## Note:

Prime all un-primed exterior wood before painting. (Follow directions provided by manufacturer.)

• Install felt flush to all roof edges overlapping 3". Use minimal amount of roofing nails to hold in place.

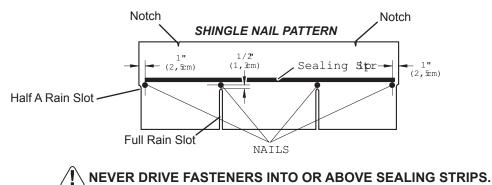

# SHINGLES

Follow directions provided by manufacturer and these instructions.

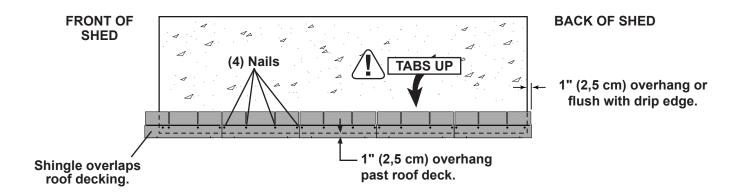

/ Familiarize yourself with a 3-Tab Shingle.

# 

1

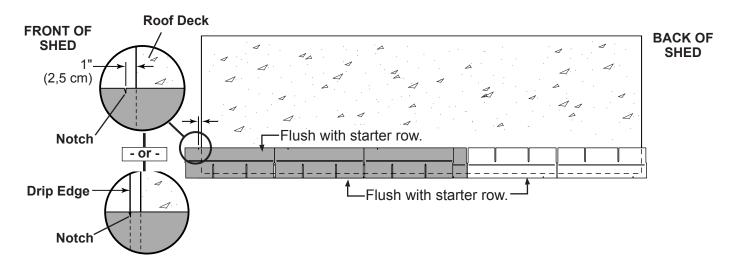

Install first starter row upside down and color up with a 1" overhang at back and bottom of roof panel. Use (4) nails per shingle. Starter row must be straight and level all the way across with lower edge of roof deck. NOTE: If you have installed drip edge install shingles flush to drip edge.

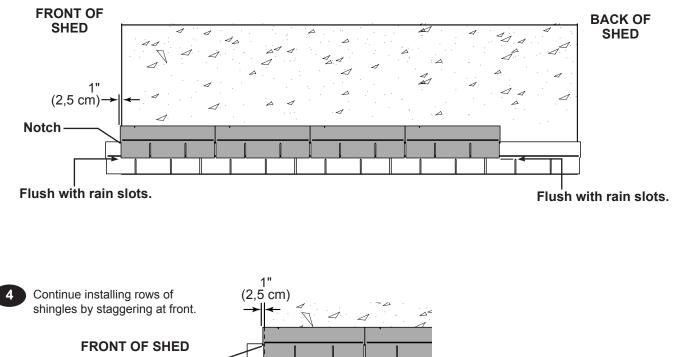

# SHINGLES continued...

Beginning at front of shed, install first row of shingles with notch at 1" past roof edge or flush with drip edge.

2

Install second row of shingles flush at top of first row's rain slots. Ensure 1" overhang or flush to drip edge at front, stagger each row.

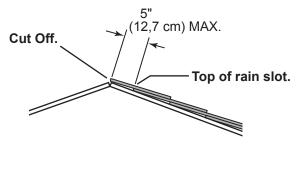

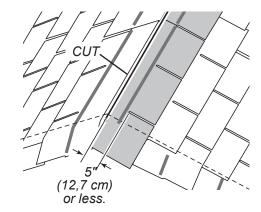

Notch<sup>\*</sup>

# SHINGLES continued...

5

Continue installing rows of shingles to the peak. At the peak make sure there is a maximum of 5" or less to the rain slot, as shown below. If shingles overlap at ridge cut to peak with a utility knife.

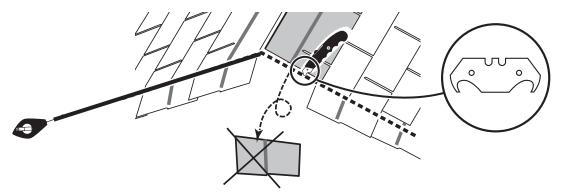

• If more than 5" to rain slot you must install another row of shingles.

6 Repeat steps 1 - 5 to shingle the opposite side of your roof. Trim shingles at ridge.

Once both sides are shingled you need to trim ends. Strike a chalk line 1" from edge.

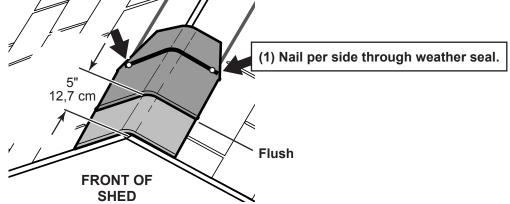

Using your shingle hooked blade carefully cut shingles along chalk line.
