

10 SPRAYER TIPS & TRICKS

If you've just purchased a new FIMCO sprayer, this guide will walk you through 10 simple steps to set it up right the first time. A few minutes of prep now can save you hours of frustration later. Let's get started.

If you have any questions, our U.S.-based customer service team is here to help.

Call us at 800-831-0027, Monday through Friday, 8 to 5 Central.

1 **TIGHTEN HOSE CLAMPS**

Make sure to tighten all hose clamps to avoid leaks and pressure issues.

2 **INSPECT THE TANK**

Look inside the tank. Remove any parts or loose items that may be inside from the manufacturer.

3 **RINSE OUT TANK**

Rinse out the tank with clean water to remove any dust and debris left over from the manufacturing process.

4 **TEST WITH PLAIN WATER**

Before adding chemicals, make sure to test the system with water to ensure everything is working properly.

10 SPRAYER TIPS & TRICKS

5

OPEN THE INTAKE VALVE

If your sprayer has a shut-off valve on the intake line, open it.

6

CLOSE THE MANIFOLD VALVES

Close any valves on the manifold so the pump can build pressure properly when you start it up.

7

POWER UP THE PUMP

Turn the pump on and let it build pressure. Once it reaches its rated PSI, it will automatically shut off. It will restart when it's needed.

8

ADJUST THE PRESSURE

Set the pressure to your desired spraying level. For most applications, around 30 PSI is ideal.

9

CHECK THE STRAINER

Shut off the pump, close the intake valve, and check the strainer. You want to see clean, clear water flowing to the pump with no debris.

10

ADD CHEMICALS AND SPRAY

If everything checks out and the strainer is clear, you're ready to add chemicals and begin spraying.
