

ARCHED TRELLIS WITH POT HOLDERS

Read this manual carefully before use and save it for future reference.

Location

Select a location with firm soil, sufficient space for the trellis and for the plants that will be climbing on it and/or placed in the pot holders, as well as adequate sunlight required for your plants.

Preparation

Clear any debris that may prohibit the trellis stakes from being fully pressed into the ground, such as mulch, roots, straw, stones or pavement.

Installation

Press the trellis into the ground by pushing near the base of the stakes. Never press on the trellis into the soil with your foot as doing so may bend or break the unit. If the ground is too hard, slowly saturate the soil with water to help soften it. For maximum stability, ensure the stakes are fully below the soil surface.

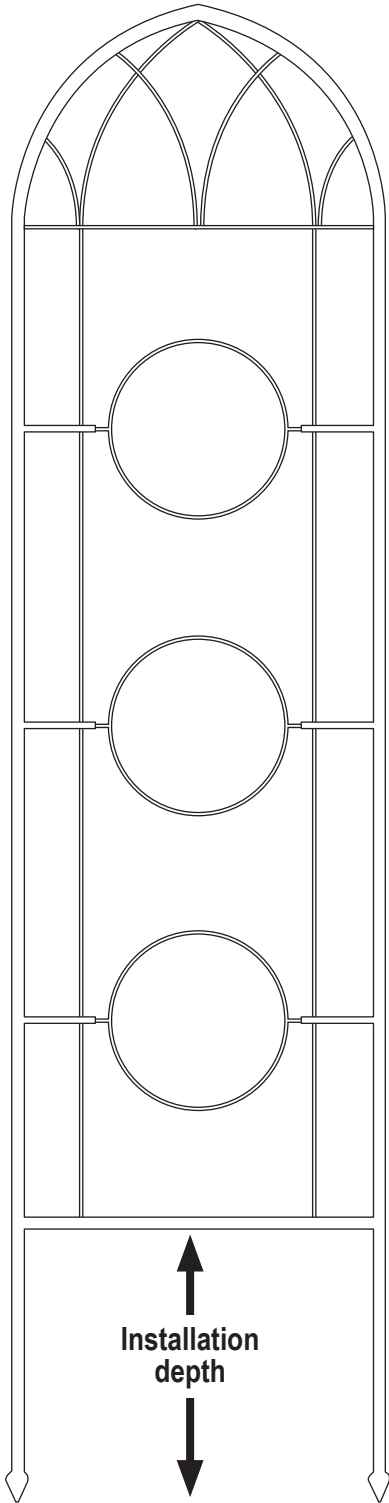

Pot Holders: Turn the pot holder rings horizontally and place your potted plant inside the ring. Do not release the potted plants until you are certain the trellis can bear the weight. Do not overload or exceed the weight capacity of each pot holder ring.

General Use & Care

INSTALLATION: Ensure proper stability is obtained when installing the unit.

CLEANING: Use a slightly damp, soft cloth to wipe away dirt and debris.

WINTER CARE & STORAGE: After the growing season has ended, remove the trellis from the ground and store in a dry, indoor location to prevent damage and the threads of the pot holder rings from rusting.

Any modification to the product or failure to follow recommended care will void the product warranty.

WARNING:

Manufacturer and seller expressly disclaim any and all liability from personal injury, property damage or loss, whether direct or indirect, or incidental, resulting from the incorrect attachment, improper use, inadequate maintenance, or neglect of this product.
