

EASY CARE TIPS FOR YOUR BIRTHDAY CAKE™ BUTTERFLY BUSH

WATER

Give your plants a good soaking about once per week, and more often when it's hot. Keep in mind that plants in containers dry out faster than in the ground. If leaves are wilting or curling, more water is needed. Use a soaker hose or drip system to make watering easier.

PRUNE

In spring, after the threat of frost is over, prune just above the new spring growth and prune out any dead stems.

FERTILIZE

We recommend using an organic fertilizer in spring and summer. Follow the instructions on the product label.

MULCH

Reduce watering and weeding by adding a 2-3 inch layer of organic bark mulch around your plants. You can find this at your local garden center.
