

# EASY CARE TIPS FOR YOUR DRAGON BABY™ HARDY HYDRANGEA

## **WATER**

Give your plants a good soaking about once per week, and more often when it's hot. Keep in mind that plants in containers dry out faster than in the ground. If leaves are wilting or curling, more water is needed. Use a soaker hose or drip system to make watering easier.

## **PRUNE**

Prune in spring after the threat of frost is over. Trim branches down to about 12 to 18 inches from the ground for great form and flower performance.

## **FERTILIZE**

We recommend using an organic fertilizer in spring and summer. Follow the instructions on the product label.

## **MULCH**

Reduce watering and weeding by adding a 2-3 inch layer of organic bark mulch around your plants. You can find this at your local garden center.
