

EASY CARE TIPS FOR YOUR PINEAPPLE POPROCKS® SPIREA

WATER

Give your plants a good soaking about once per week, and more often when it's hot. Keep in mind that plants in containers dry out faster than in the ground. If leaves are wilting or curling, more water is needed. Use a soaker hose or drip system to make watering easier.

PRUNE

In spring, after the threat of frost is over, cut it back to about a foot off the ground to encourage healthy branching and flowering that season.

FERTILIZE

We recommend using an organic fertilizer in spring and summer. Follow the instructions on the product label.

MULCH

Reduce watering and weeding by adding a 2-3 inch layer of organic bark mulch around your plants. You can find this at your local garden center.
