

# EASY CARE TIPS FOR YOUR PRIVATE JET™ ARBORVITAE

## **WATER**

Give your plants a good soaking about once per week, and more often when it's hot. Keep in mind that plants in containers dry out faster than in the ground. Use a soaker hose or drip system to make watering easier.

## **PRUNE**

In spring, after the threat of frost is over, trim out any diseased or unruly branches. Private Jet™ Arborvitae requires very little pruning.

## **FERTILIZE**

We recommend using an organic fertilizer in spring and summer. Follow the instructions on the product label.

## **MULCH**

Reduce watering and weeding by adding a 2-3 inch layer of organic bark mulch around your plants. You can find this at your local garden center.
