Maintenance:

Your new Vessel Sink faucet is designed for years of trouble-free performance. Keep it looking new by cleaning it periodically with a soft cloth. Avoid abrasive cleaners, steel wool and harsh chemicals as these will dull the finish and void your warranty.

Preparation / Assembly

Shut off water supplies. Remove the old faucet. Clean the sink surface in preparation for your new faucet.

Place the flange on the bottom of the faucet before positioning the faucet through the mounting hole.

Secure the faucet to the sink by installing the plastic washer, steel washer, and nut onto the shank. Tighten with a wrench.

Apply pipe tape onto the threads of the water supplies. Use a wrench when tightening the hose connection. Do not over-tighten.

Important: After installation is completed, turn on the water supply and allow both hot and cold water to run for at least one minute each. While water is running, check for leaks. Reinstall aerator, and your new faucet is now ready to use.
