

EP Decking – Wood Plastic Composite (WPC) Dig-In Installation Fencing Guide

EP Decking fences are made from durable and weather-resistant Wood Plastic Composite (WPC) materials. Designed for elegance and privacy, they resist mold, mildew, rot, and termites. No painting or staining is required, and the fences are easy to install on various surfaces using the proper base holder. Each fence panel consists of two WPCFB boards and one WPCF-A01 board, forming a 6' x 6' panel.

- ✓ **Wood Plastic Composite (WPC)**
- ✓ **Resistant to Mold, Mildew, Rotting, & Termites**

	WSD8	Washer (C)	2
Post Holder	LHMZL004	Pronged Post Holder For Dig-In Installation	11

*****Please read all instructions before installing your new fence.**

*****Below the Surface Dig-In Installation**

1. Installing the Pronged Post Holder:

Dig a hole at your desired starting point.

(Minimum recommended dimensions: 9" x 9" x 24")

Fill the hole with wet concrete.

2. Insert the Post:

Insert the pronged side into the wet concrete until the square plate rests on the surface.

Ensure the side with holes does not face the direction where the fence boards will be installed.

Verify the post is perfectly vertical (90° to the ground).

For sections of 6", maintain a distance of 72 inches between the centers of two post holders. Please adjust accordingly for distance less than 72 inches.

Allow the concrete to cure for at least 48 hours or until fully set.

3. Fit the Bottom Cover:

Slide the bottom board rail onto the post, ensuring it fits snugly for a finished look.

4. Insert Fence Board:

Starting from the bottom, insert the boards horizontally. Ensure they align evenly.

5. Install Side Bar and Top Cover:

Attach the side bar to the post. Fit the top board cover and secure with corner clips.

6. Attach the Post Cap:

Secure the post cap to the top of the post using screws.
