

## Fly Boots with Fleece Trim

Item: KFB200

Plush fleece trim for comfort

Interior stay prevents boot from collapsing

Web Trim at Hoof for Added Durability

3 Closures for a Secure Fit

Textilene® provides protection from flies and UV rays

Kensington's Protective Fly Boots are a great choice for leg protection during the summer months by preventing insect bites, and stopping stomping due to pesky bugs. Constructed with Textilene® these boots are 78% air permeable and 73% UV resistant. These boots stay upright because a plastic stay is hidden within the thick fleece trim. Three hook and loop closures ensure a snug fit from top to bottom.
