

**BEFORE USE:** The use of boiling water, anti-bacterial soap, or other chemicals like root killers in conjunction with Septic Liberator will negatively impact performance. If your septic tank has been pumped, wait at least two weeks or until the water level in the tank has reached the outlet. This way the bacteria and enzymes can flow to the field if added through your septic tank of toilet.

**DOSING:** For septic tanks 1,500 gallons or less, use 7.5 lbs of Septic Liberator. For septic tanks over 1,500 gallons, use 15 lbs two weeks apart.

**MIXING:** Mix all 7.5 lbs of Septic Liberator in a 5 gallon bucket with roughly 4 gallons of warm, not hot water. Let sit for ½ hour and mix with a drill mixer or stir stick every 5 to 10 minutes. This is very important as it enables the bacteria to become active before being placed into the harsh septic environment, (THE POWDER WILL NOT DISSOLVE IN THE BUCKET).

**APPLICATION:** Pour the mixture of water and Septic Liberator directly into the distribution box before the leach lines or cesspool. If this is not possible, pour it into the septic tank through the inspection pump out port closest to the leach field. If this is also not possible, pour the mixture down the toilet that is closest to the septic tank.

**NON-TOXIC • SAFE FOR ALL TYPES OF PLUMBING**

**INGREDIENTS:** PROPRIETARY CARRIER, MICRO NUTRIENTS, ENZYME PRODUCING BACTERIA, WIDE VARIETY OF SPECIALIZED ENZYMES.

## AN ALTERNATIVE TO DIGGING

**EcoStrong Septic Liberator** is designed to prevent having to replace your failing leach field or cesspool. Symptoms of a failing system include wet grass, sewage odors and slow/gurgling drains. Most often these issues occur when the soil in the leach field bed cannot absorb liquid fast enough. This is caused by an organic build up of bio-mat in the leach field bed and surrounding soil. Septic Liberators work by biologically chopping up and digesting the bio-mat build-up restoring flow and improving drainage.

**SEPTIC LIBERATOR IS NON-TOXIC, ENVIRONMENTALLY FRIENDLY, BIODEGRADABLE, AND SAFE FOR ALL TYPES OF PLUMBING.**

Not every septic disaster is identical. In some cases you may need to use Septic Liberators more than once over the span of several weeks. We observe approximately an 80% success rate with Septic Liberators. For added peace of mind you can call us directly and we can walk you through the process and in some cases tailor the treatment to your specific situation.

**WARNING: KEEP OUT OF REACH OF CHILDREN.**

Do not ingest. Wash hands thoroughly after each use. Keep out of eyes and/or open sores. May cause eye irritation. If irritation occurs rinse eyes thoroughly with water for several minutes. If irritation persists, seek medical attention.

**STORAGE:** Store in a dry location.
