AG36-3 shown

- **Strong** - Ability to have a continuous top rail adds vertical strength. Wider flange provides larger area to enhance strength.
- **Fast** - Run pickets fast with smaller diameter post holes than with wood posts.
- **Versatile** - Accommodates many fence designs and styles. Posts can be hidden or visible. Can be installed using pneumatic or manual post driver.
- **Add Ons** - Works perfectly with Adjust-A-Gate® Steel Gate Frame kits. Rail support clips add additional strength for high winds.
