1. One cellulase unit (CU) is defined as the amount of activity that will produce a relative fluidity change of 1 (determined with a calibrated viscometer) in 5 minutes in a defined carboxymethylcellulose substrate at pH 4.5 and 40°C.

2. One hemoglobin unit (HUT) of proteolytic (protease) activity is defined as that amount of enzyme that produces, in one minute under the specified conditions, a hydrolysate whose absorbance at 275nm is the same as that of a solution containing 1.10g per mL of tyrosine in 0.006N hydrochloric acid. Estimated values determined by Equi-Analytical, Ithaca, NY.

3. One bacterial protease unit (PC) is defined as the quantity of enzyme that produces the equivalent of 1.5µg/mL of L-tyrosine per minute under assay conditions of pH 7.0 and 37°C.

FEEDING DIRECTIONS

Feeding recommendations assume a horse is consuming a minimum of 1.50 to 2% of its body weight in hay or pasture and are based on average daily requirements. Horses' needs may vary based on age, work level, metabolism, weather and other factors. Adjust the amount of Triple Crown Diamond Senior, up or down, as needed to maintain desired body condition. If less than the amount recommended is fed per day, supplement with Triple Crown Diamond Balancer.

Do not feed more than 0.50% of the horse's body weight of Triple Crown Diamond Senior in a single meal. Allow 3 to 4 hours between meals.

NOTE: Provide salt and plenty of fresh, clean water at all times. Keep product fresh in cool, dry storage. Examine product daily. DO NOT use if old, moldy or contaminated with insects.

CAUTION STATEMENT: Follow label directions. Feeding added Selenium at levels in excess of 0.30 ppm in the total diet is prohibited. Product contains added Copper; do not feed to sheep.
