

Plant With Purpose™ Flower Booster Water-Soluble Fertilizer 10 pods

Mixing: Simply drop one water-soluble pod into one gallon of water. Stir or shake the container as the pod dissolves. Unused solution may be stored for a few days, and should be stirred or shaken before each use.

Application: Apply the fertilizer solution to flower beds or individual plants as if you were watering them. Reapply every 7-14 days when the plants are in active growth and bloom.

Storage: Because the water-soluble pods will readily absorb water, it is important to store them in a dry area and keep the container tightly closed at all times.

**For all houseplants, flowering annuals & perennials.
10 dissolvable pods make 10 gallons of fertilizer.**
