

Plant With Purpose™

Rose Booster

Water-Soluble Fertilizer

10 pods

Mixing: Simply drop one water-soluble pod into one gallon of water. Stir or shake the container as the pod dissolves. Unused solution may be stored for a few days, and should be stirred or shaken before each use.

Application: Apply the fertilizer solution to flower beds or individual plants as if you were watering them. Reapply every 7-14 days when the plants are in active growth and bloom.

Storage: Because the water-soluble pods will readily absorb water, it is important to store them in a dry area and keep the container tightly closed at all times.

Excellent for all of your garden and container grown roses, including hybrid tea, antique, climbing, hedge and mini roses.

Total Nitrogen (N).....	18.00%
Nitrate Nitrogen.....	5.71%
