

EQUINE CHOICE® TURNOUT

A Natural Way to Supplement Forage

PRODUCT DESCRIPTION

Equine Choice® Turnout is a unique supplement formulated to help correct and balance the nutritional deficiencies of pasture and hay. The product is a cooked, hardened blend of molasses solids, fat, protein, minerals, and vitamins. Equine Choice® Turnout offers a high-energy, balanced nutritional supplement for horses in a palatable, labor-saving, controlled-consumption package!

FEATURES AND BENEFITS

Energy Dense - The combination of molasses and fat provides controlled energy release in a highly digestible product. Molasses, with its high sugar content, stimulates intake and provides a readily available energy source. Vegetable oil, the most concentrated source of energy, increases energy density and efficiency while improving skin and hair coat condition.

Balanced Mineral Nutrition - Mineral supplementation is necessary to help minimize the detrimental effects of mineral imbalances found in forages. Optimum levels and ratios are supplied by Equine Choice® Turnout to ensure a balanced diet for maintenance, breeding, and performance.

Complete Vitamin Nutrition - Guaranteed levels of all vitamins, including the B-complex, eliminates the need for special vitamin paks. Vitamins A, D, and E are added to provide a supplemental source to guard against deficiencies and help maintain optimal health and metabolism. B-vitamins, including Biotin, are important for the efficient breakdown and transformation of nutrients into usable energy. B-vitamins also help maintain the growth and health of skin, hair and hooves.

Digestive Function - To consume the product, horses will gradually lick the surface of Equine Choice® Turnout throughout the day. This ensures a slow, steady intake of nutrients, which supports the digestive environment for efficient forage utilization. This licking action also increases saliva production, which further aids in digestion and minimizes digestive upsets.

Natural Consumption - The physical form of Equine Choice® Turnout initially presents as a hard product, but soon forms a thin layer of soft, viscous material on the surface as it draws moisture from the air. This layer is readily consumed by horses. As more moisture from the air along with saliva from previous licking meets the exposed surface of the product, another thin layer of material becomes available for consumption. This process results in a slow, controlled consumption that mimics the natural eating pattern (grazing) of horses, allowing nutrients to be gradually introduced to the digestive system throughout the day.

Labor Saving, Weather Resistant Package - Equine Choice® Turnout can be self-fed. The product comes in 33.3-lb pails for hanging in a stall, and 50-lb rubber tubs or 250-lb plastic barrels that can be placed directly on the ground, eliminating daily feeding and handling. Rain, snow, heat, or cold does not affect the composition or consumption. Excess moisture or heat does not cause the product to soften or melt down.

EQUINE CHOICE® TURNOUT

A supplement for horses for maintenance, breeding, and performance

FEEDING DIRECTIONS

Free-choice Equine Choice® Turnout to horses on all types of rations to provide supplemental nutrients when fed along with grain and roughages. Place pail(s) or tub(s) or barrel(s) in a dry location near the animal's source of water, salt, mineral, or loafing area. Consumption will vary depending on animal size; stage of production; quality, source, and availability of roughage and/or grains; number of animals per pail/tub/barrel; and location.

	33.3-lb pail	50-lb tub	250-lb barrel	Intake/head/day
Number of Horses	1 - 2	2 - 3	9 - 15	0.5 to 1.5 lb

DAILY INTAKE VALUES ARE APPROXIMATE. To increase consumption, decrease the number of animals per pail/tub/barrel. To reduce consumption, increase the number of animals per pail/tub/barrel, or place pail/tub/barrel away from the normal loafing area. Provide clean, fresh water and free-choice salt at all times.

The suggested feeding program is intended solely as a guide. The variables of management, environment, and breed may dictate changes in the horses' requirements.

Do not stack anything on top of containers without placing a slipsheet or wooden pallet between them.
