

Merry Misfit

Care Instructions

Light:

Place your plant in bright, indirect light. It thrives near a sunny window but avoid prolonged exposure to harsh afternoon sun, which can scorch the foliage.

Water:

Keep the soil consistently moist but not soggy. Water when the top inch of soil feels dry and ensure the pot has good drainage to prevent root rot. Avoid letting it dry out completely.

Temperature:

Maintain a cool environment (60–70°F). Avoid placing near heating vents, drafts, or cold windows.

Humidity:

Lemon Cypress prefers moderate humidity. If indoor air is dry, mist occasionally or place the pot on a tray of pebbles and water to increase moisture.

Fertilize:

Feed monthly during spring and summer with a balanced liquid houseplant fertilizer, diluted to half strength. Do not fertilize in fall or winter.

Pruning:

Trim lightly to maintain shape and encourage dense growth. Remove any brown or dry tips as needed.
