

INTRODUCING THE GROSTIK™

GroStik

MAKE GROWING EASY

About GroStik

At GroStik, we share a passion for growing food at home and for the environment. With our innovative technology and the right partners at our side we believe that GroBud can have a big impact on both consumers and the planet in a positive way.

Our Mission

To help make growing plants at home easier and cheaper while reducing the World's Carbon footprint.

Our Vision

To be the reliable and affordable brand growers think of when planting their next crop, and to have helped the World get to Net Zero Carbon Emissions.

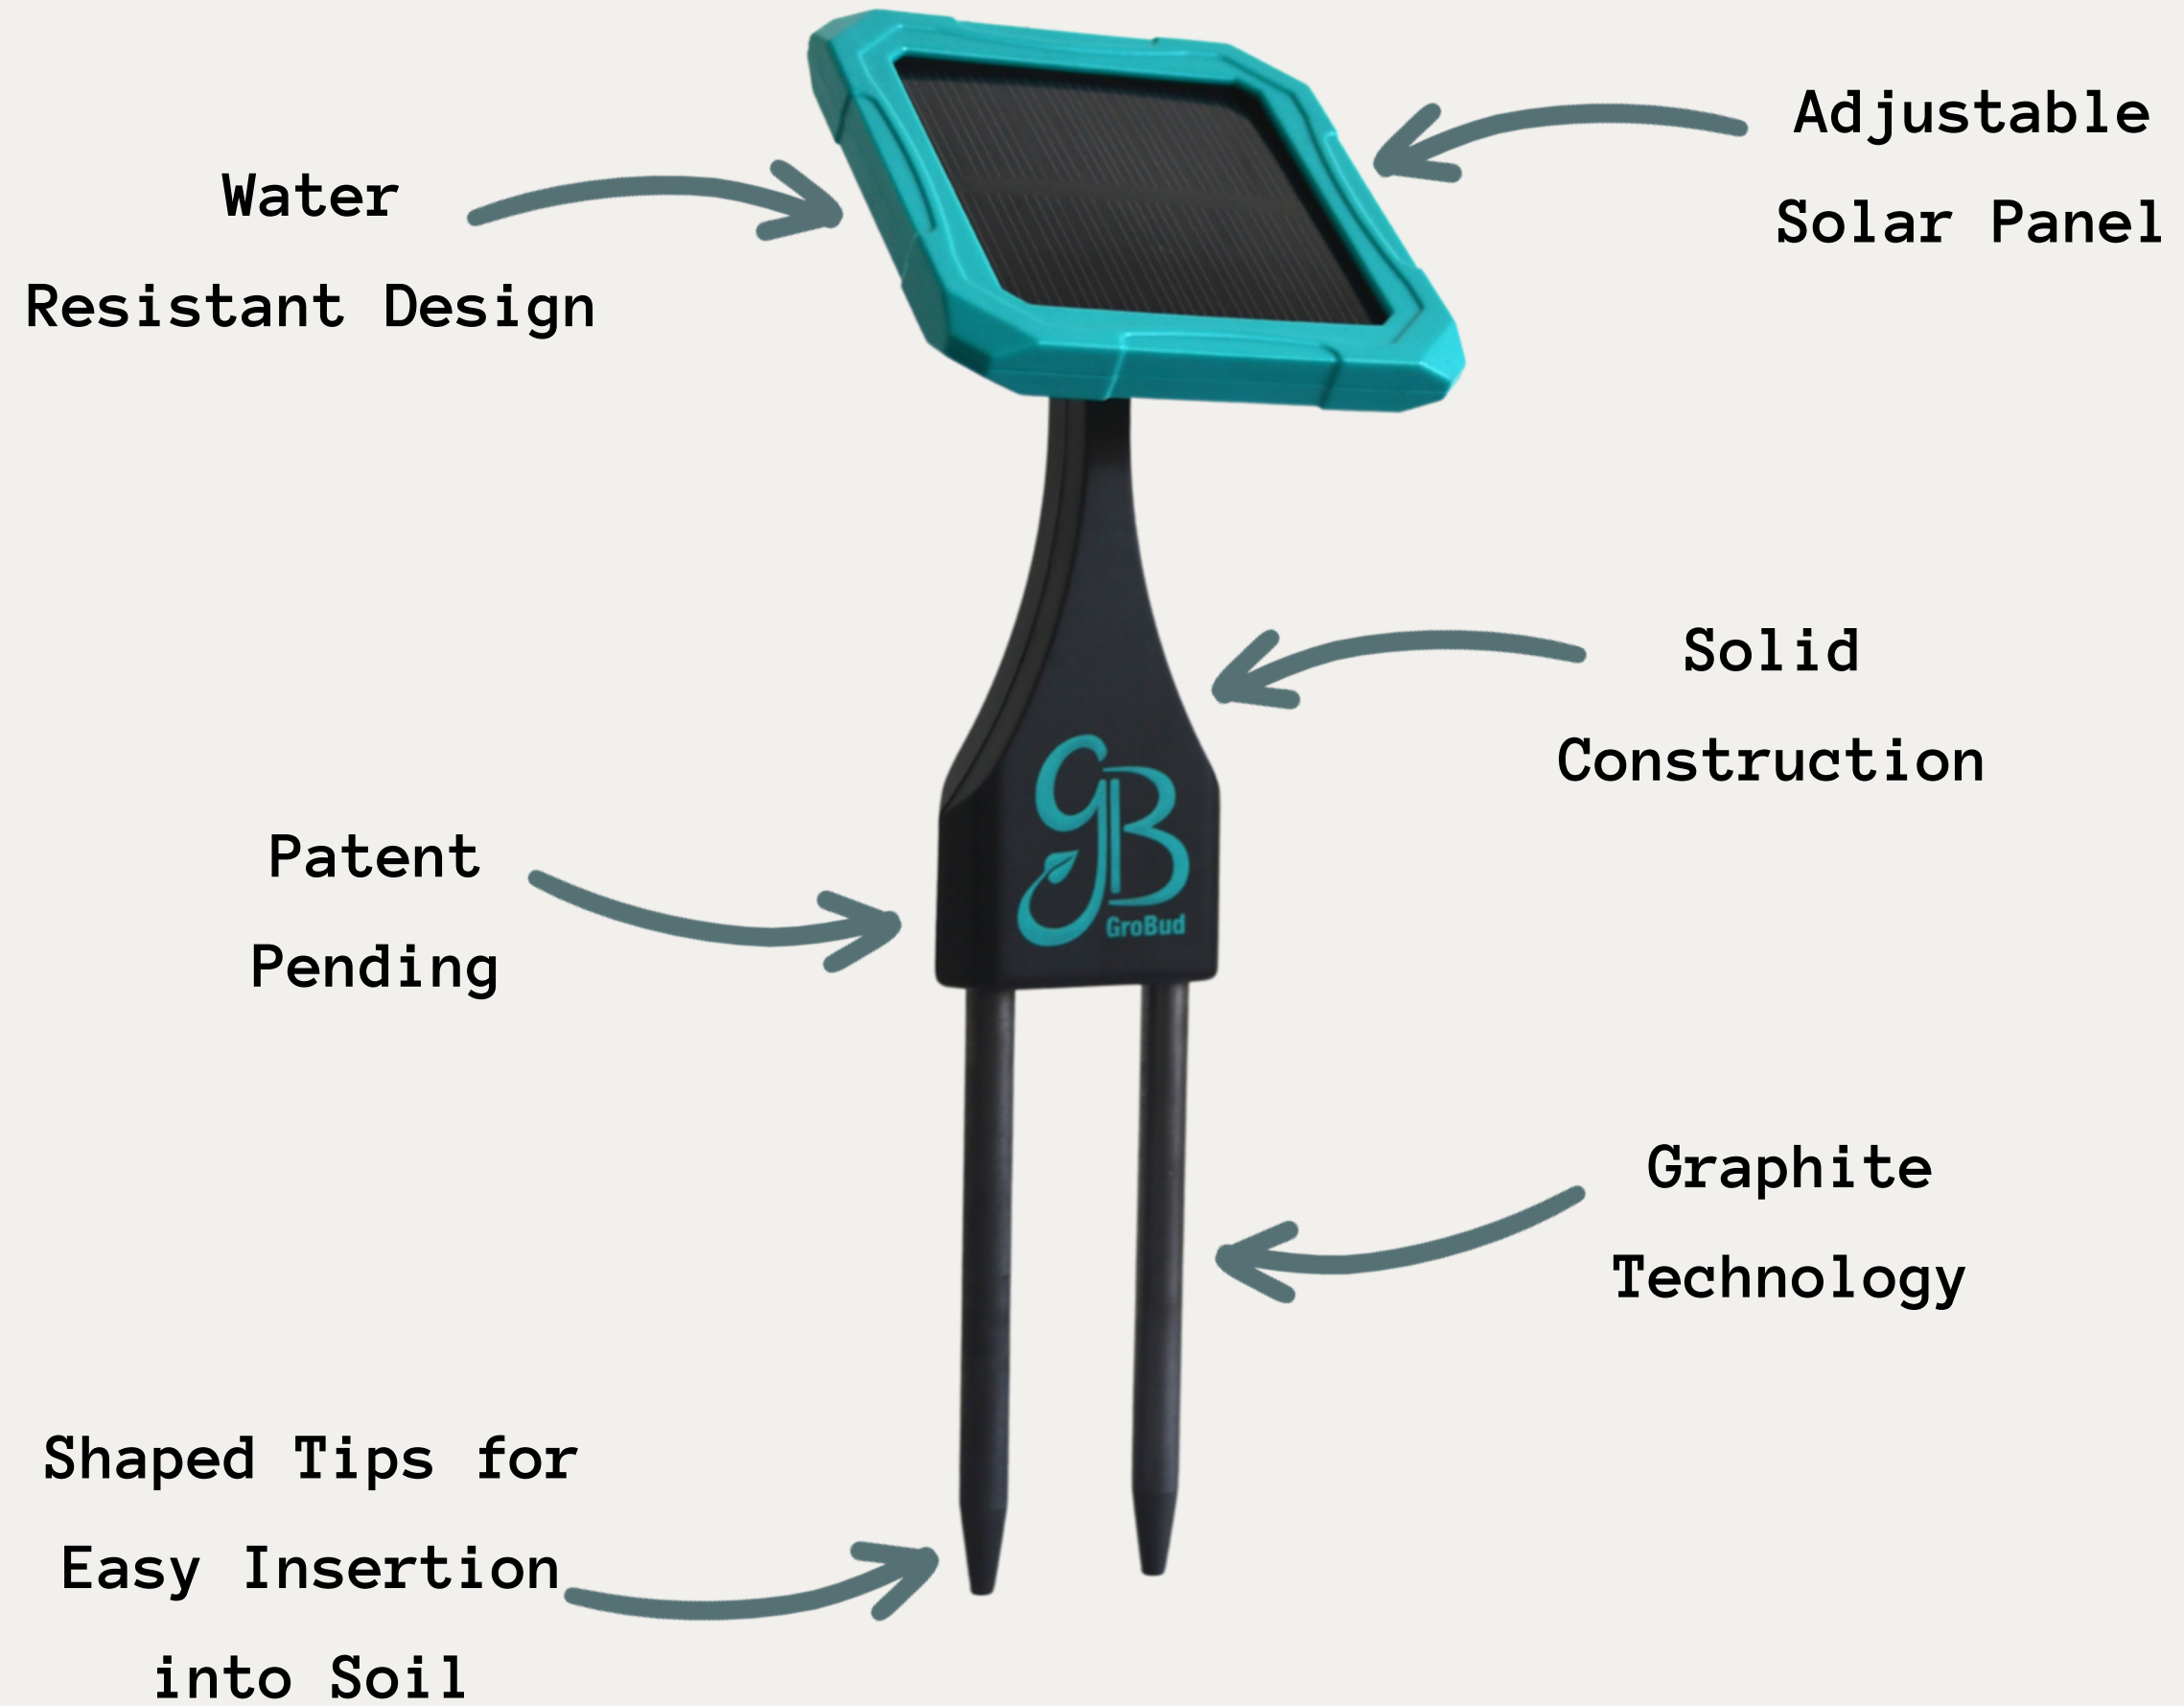

The GroStik™

GroStik utilizes the sun's energy and the latest in graphite technology to safely activate the soil surrounding your plant.

It rapidly increases the growth rate and yield by as much as 50%, while naturally deterring insects without any chemicals.

The GroStik can be used in direct or indirect light and can be reused time and time again; simply wipe the rods after each growth period and you're good to go.

How it Works

The GroStik , once inserted into the soil, will electrify the surrounding area with very safe, low voltage power supplied from solar energy transmitted through the graphiteTM, carbon technology. The GroStik works in both direct or indirect light, indoors or outdoors settings. A single GroStik has an effective range up to 3m.

GroBud Pty Ltd technology allows plants to grow bigger, better and faster. The GroStik deters insects whilst reducing the need for fertilizers and pesticides, which can be costly, inconsistent and harmful to the environment.

A plant uses up to 50% of its supplied energy to maintain its growing environment. However, with the intervention of the GroStik , an ancillary energy resource is provided to the plant.

This reduces the plants energy requirement to maintain its high production, thus allowing it to utilize more energy to transport nutrients and propagate growth.

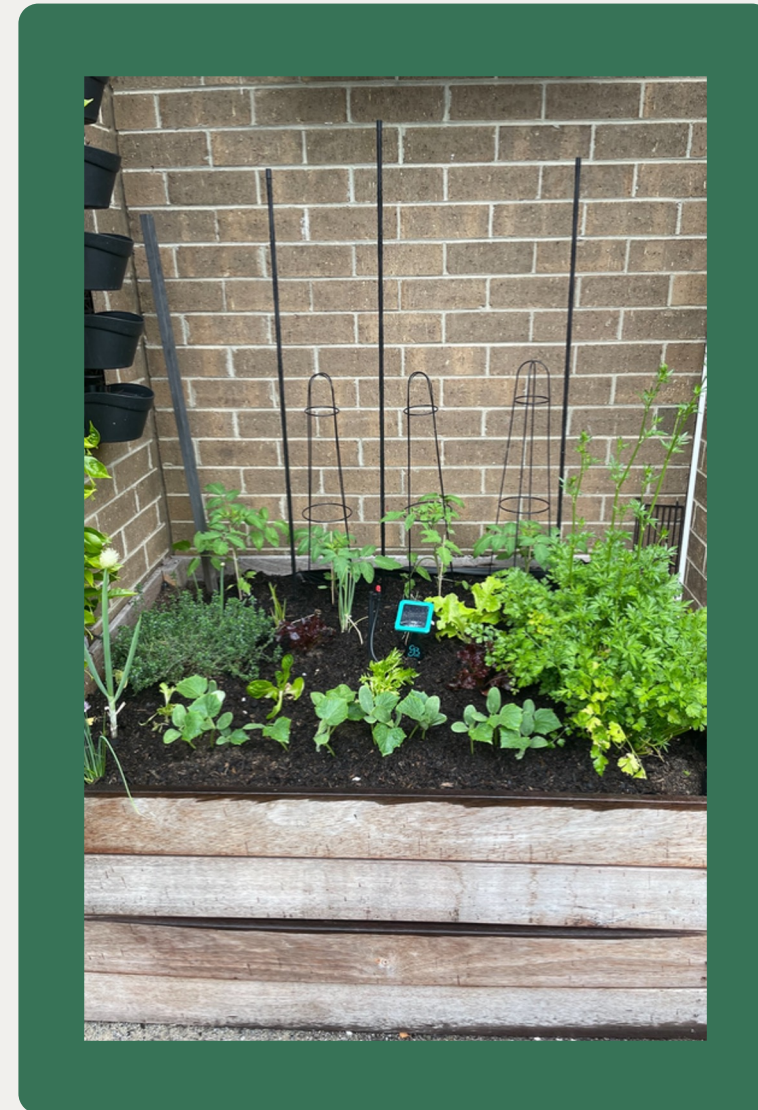

Essentially, the GroStik takes the stress out of metabolising nutrients allowing a plant to maximise its energy use into promoting growth rate and yield significantly. Plus it can be used, time and time again.

CUSTOMER REVIEWS

"For years my palm only had two major stems. However, since using the GroStik I've seen additional stems and new leaves start to grow! It's unbelievable!"
- Brendan

"I've just started using the GroStik and WOW I've already noticed a difference. My sage was being eaten by bugs and now it's thriving!!"
- Rochelle

"I can't believe how big my little lettuce leaves are growing. I've been comparing it to a control and the difference is amazing!"
- Olivia

In only 15 days, the GroStik Basil seedling resulted in 55% more edible yield. Click below to watch our time lapse capture the growing in action.
