

Van Zyverden's
ELEPHANT GARLIC

Elephant garlic (*allium ampeloprasum* var. *ampeloprasum*), despite its name, is not actually a true garlic. Instead, it is a close relative of the leek and belongs to the same botanical family as garlic, onions, and leeks. Elephant garlic is sometimes referred to as a 'wild leek' or 'great headed garlic' due to its large bulb and mild garlic-like flavor.

Perfect for raised beds and containers

Easy to grow and maintain

Full Sun

About This Variety: Elephant garlic is popular for its ability to grow as large as a softball. Its individual cloves are much larger than a typical garlic clove and is its most distinctive feature. Its flavor is sweet and mild, closer to that of a leek or scallion. There generally are fewer but larger cloves within each bulb. The scapes (stalks) are edible and do not produce a flower. Elephant garlic does well in northern regions of the country, in fact, better than some true garlic varieties. Popular choice for those that seek a milder garlic flavor.

Growing Instructions: Timing of the harvest is crucial to ensure the bulbs are mature and properly cured for storage. In general, garlic is ready to harvest when approximately half of the lower leaves have turned yellow or brown, normally early summer. Carefully lift bulbs from the ground with a garden fork (garlic bulbs need to be handled gently). Carefully shake off excess soil. Trim the leaves of the plants, leaving about 1.5" of stem above the bulb. Trim roots to about a quarter inch in length. Allow the garlic bulbs to cure by laying them out on a flat surface out of direct sunlight until the outer wrappers become dry and papery. Proper curing is essential for maintaining flavor and quality. After the curing stage, remove remaining roots and tops and thoroughly clean the bulbs. The garlic is now ready for storage. Store in a cool, dry place with good ventilation in a net bag, basket or crate. Some garlic varieties can be braided and hung.

Care Tip: Grow your own fresh garlic

Blooms: Summer

Exposure: Full Sun

Height: 24-48"

Spacing: 3-6", 2-3" deep

USDA Zones: 5-10

Guaranteed to grow 1 year from purchase if directions are followed. Any concerns related to quality and/or counts feel free to contact us.
