

EASY CARE TIPS FOR YOUR

FORGED BY FIRE™ SILENE

WATER

Give your plants a good soaking about once per week, and more often when it's hot. Keep in mind that plants in containers dry out faster than in the ground. If leaves are wilting or curling, more water is needed. Use a soaker hose or drip system to make watering easier.

PRUNE

In spring, after the threat of frost has passed, remove winter-killed leaves and stems down to fresh green growth, taking care not to cut into the crown.

FERTILIZE

We recommend using an organic fertilizer in spring and summer. Follow the instructions on the product label.

MULCH

Reduce watering and weeding by adding a 2-3 inch layer of organic bark mulch around your plants. You can find this at your local garden center.
