

# EASY CARE TIPS FOR YOUR PERPETUAL PURPLE™ MEADOW SAGE

## **WATER**

Give your plants a good soaking about once per week, and more often when it's hot. Keep in mind that plants in containers dry out faster than in the ground. If leaves are wilting or curling, more water is needed. Use a soaker hose or drip system to make watering easier.

## **PRUNE**

In spring, after the threat of frost has passed, cut back last year's stems to 2–3 inches above the crown, removing any dead material.

## **FERTILIZE**

We recommend using an organic fertilizer in spring and summer. Follow the instructions on the product label.

## **MULCH**

Reduce watering and weeding by adding a 2-3 inch layer of organic bark mulch around your plants. You can find this at your local garden center.
