

THE PROBLEM

RUST IN YOUR DISHWASHER

Rust in dishwashers is a widespread issue. It can stem from old plumbing, poor water quality, or aging appliances. A major driver is iron-rich groundwater, which causes stubborn rust stains on cutlery, dishes, and even inside the dishwasher.

Ruined Silverware

Rust damages on pans, pots, and silverware.

Expensive Repair

Rust can lead to expensive repairs or even appliance breakdown.

Frustrating Cleanup

Rust is tough to remove and makes cleanup frustrating.

#1 The In-Dishwasher Rust Solution

Patented Innovation · German Engineering Masterclass

The only Product that prevents Rust
inside of your Dishwasher!

Rokitta Rust Guard Sales Deck 2025

How it works

01 Placement

Place RUST GUARD in your dishwasher basket

02 Attraction
