INSTALLATION INSTRUCTIONS

PGG-30 PROTECTIVE GRILL GUARD

Step 1: Place the heater on a flat surface with the reflector/element side facing you.

Step 2: If the heater is new, cut the plastic tie(s) from each element support bracket.

Step 3: Place the PGG-30 in the heater so the bottom horizontal rod fits inside the bottom lip on the heater. The top horizontal rod must be compressed to snap the grill inside the top lip of the heater.

65" Heaters: Open ends meet in the middle of the heater, with the closed ends facing out.

Step 4: Push the top horizontal rod of the grill guard against the top lip of the heater and gently press down so the grill starts to go under the heater lip.

Step 5: With even pressure from both hands, the grill should snap into place!

If you are unable to compress the grill guard without the aid of any tools, try using a flat bladed screwdriver. Insert the screwdriver blade under the lip of the heater and gently pry down the top horizontal rod along the length of the grill until snapped into place.

Be careful not to scratch or gash the reflector with a slip of the screwdriver.
