

504500-03 Vacuum Breaker Kit

VACUUM BREAKER PARTS

The above illustration shows the parts included in the vacuum breaker kit. The kit is for use with the V-Series and PRO-Series pumps.

Assemble kit components to pump. All threaded fuel connections must be sealed with thread tape or a pipe thread sealing compound approved for use with petroleum fuels. Do not use pipe thread tape or thread sealing compound when joining the flared 1/4" tube assembly to the elbow flare adapters. Tighten all joints securely.

The 90-degree fitting (from the kit) is designed with a small orifice hole. It is normal for a very small amount of fuel to bypass through this orifice (back to the tank) during pump operation. The amount of pumping loss, due to the orifice hole, is very negligible.

NOTE: The two installation images shown reflect the entirety of each line as installation ports are consistent among the product families.
