

GOLIATH

ATTIC/OUTDOOR HDTV ANTENNA

Unidirectional Yagi antenna specifically tuned for post-2007 TV signal frequencies receives UHF broadcast signals from 70+ miles away. Ideal for use in areas where the TV towers are clustered in one general direction.

The unique design provides focused reception with a narrow 24-degree beam angle and excellent rejection of interfering signals, including LTE and 5G.

Features snap-in director elements for easy, convenient installation and durable, premium materials for maximum performance.

Built to withstand the harshest conditions: Weather-resistant, ice-proof, and wind tested up to 115 mph.

Includes all-weather adjustable mounting hardware.

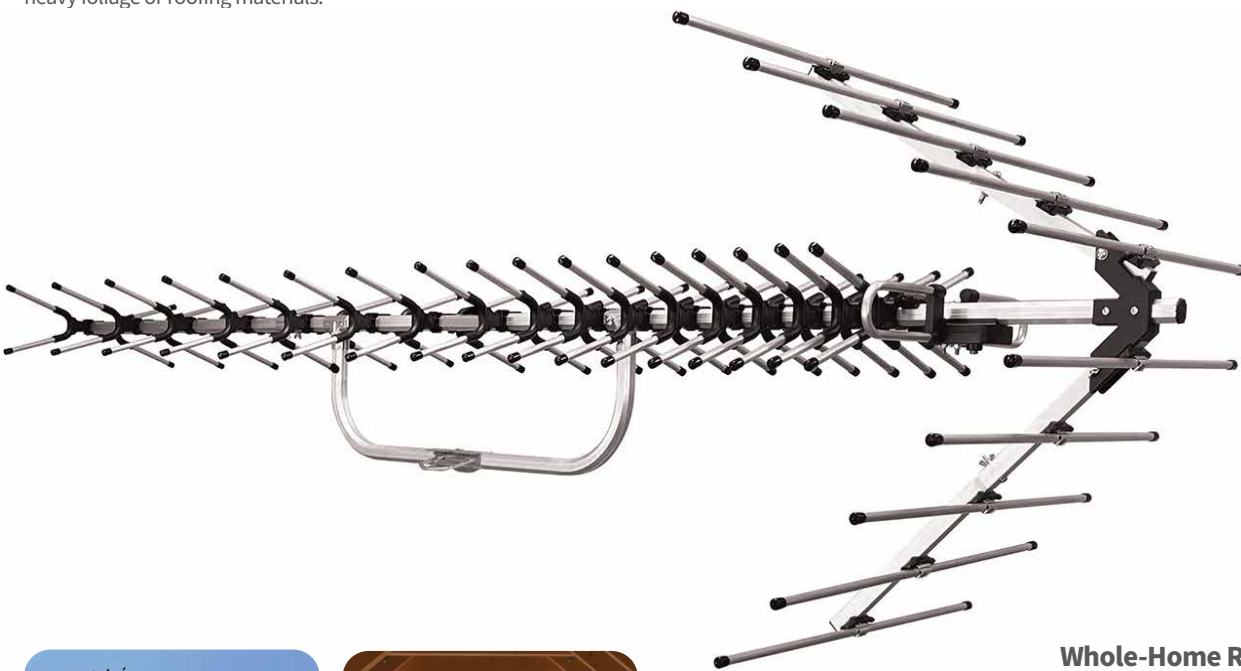

DESIGNED AND ENGINEERED IN THE USA

Proven Performance and Reliability

As perfectionists and antenna enthusiasts, innovation and quality are two of our highest priorities. This is why we offer a lifetime warranty and customer service that are unique in the industry and make us **cord-cutters' favorite brand**. Networks like ABC, CBS, NBC, FOX, PBS, Univision, and more broadcast in Full HD 1080p, 4K, 8K UHD, and NEXTGEN TV where available, because OTA signals aren't subject to compression like cable and satellite. Antennas Direct antennas are specifically engineered to receive the frequencies broadcast in North America and truly provide the best, most consistent reception of over-the-air TV signals **straight from the source**.

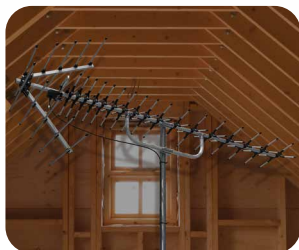

The GOLIATH Attic/Outdoor HDTV antenna is our most advanced Yagi TV antenna to date, meticulously crafted with the highest quality materials and designed with precision. Director elements, a driven element, and reflectors are all engineered in the U.S.A. for optimal performance on the frequencies broadcast for TV in North America post-2007. Designed to enhance UHF signal reception in areas where TV towers are grouped in one general direction. This unidirectional Yagi antenna provides a more precise way of targeting TV signals, with high gain and focused reception with a narrow 24-degree beam angle. Its durable construction is weather-resistant, ice-proof, wind tested up to 115 mph, and is built to last, ensuring it withstands the harshest weather conditions. Ideal for rural and suburban areas challenged with receiving free broadcast TV signals through heavy foliage or roofing materials.

70+
miles

SPECIFICATIONS:

	MODEL NUMBER GOLIATH
	RANGE 70+ Miles
	FREQUENCY UHF 470 - 608 MHz
	PEAK GAIN UHF 15.7 dBi
	BEAM ANGLE 24-Degree Horizontal Reception Pattern
	ASSEMBLED DIMENSIONS 27.5" H x 24" W x 87" L
	WEIGHT 9 lbs.
	COLOR Silver / Black
	WARRANTY Lifetime Antenna Warranty

The GOLIATH Antenna comes with:

- GOLIATH Antenna
- All-Weather Mounting Hardware
- Adjustable Mast Clamps
- Assembly and Installation Instructions

Whole-Home Ready

Bring Free TV to All Your Screens. Homes already wired for satellite or cable service have the coaxial cable needed to send your antenna's signal to multiple screens, all you have to do is connect your GOLIATH antenna and you've got FREE TV throughout the house!
